

## Empire Hydrogen Conference Centre Officially Opens at BCIT School of Motive Power

**August 2, 2019:** Empire Hydrogen CEO, Sven Tjelta, is honoured to attend the official opening of the **Empire Hydrogen Conference Centre** at BCIT's School of Transportation - Motive Power, on Annacis Island near Vancouver last week.

Empire Hydrogen has a long history of cooperation with BCIT, going back to 2010 when we introduced them to the concept of hydrogen/oxygen injection and provided an Alpha design unit for initial testing. Since that time, we have done extensive testing on fuel consumption, horsepower and emissions using BCIT's advanced equipment and as part of their commitment to support British Columbia's Green technology industries.

Executive VP Andrew Evans presents our technology to a group of Motive Power students at the **Empire Hydrogen Conference Centre**. From left: Jackie Jacob, Bruce Thompson (BCIT), Kore Simonson, Sven Tjelta (Empire Hydrogen), Steve Perry (BCIT).

It is important that Empire Hydrogen continue to introduce our system to young mechanics entering the heavy equipment industry. The BCIT School of Transportation is teaching the most advanced fuel saving, GHG and emissions reductions technologies to these students who will be servicing large engines for decades to come.
