

Empire Hydrogen Installations - SIM International & Butler Concrete

October 27, 2020: Surrey, BC: Empire Hydrogen has completed installation of evaluation units of our Class 6 and Class 8 Fuel Enhancement Systems for SIM International and Butler Concrete.

SIM International is the world's premier supplier of equipment to the television and film industry. A typical location will have two or three large generators running up to sixteen hours per day during the hectic shooting schedule. We have delivered two of our Class 6 units to SIM. Clara George, VP of Sustainable Production Services has a mandate to reduce GHG production across the company and is looking at our units for 140 generators in Vancouver and Toronto.

Empire Hydrogen on a SIM Generator

The Class 6 model of Empire's Fuel Enhancement System produces up to 1.6 Litres of hydrogen/oxygen accelerant gases per minute, and is the perfect solution for diesel engines up to 7L in displacement.

Butler Concrete and Aggregate is Victoria's leading supplier of concrete. From their own website: **Butler Concrete and Aggregate has been at the leading edge of the latest technology to provide greener building materials... We are proudly reducing our carbon footprint while providing a superior concrete product.** Butler is aiming to become the greenest concrete company in all of North America and is looking at the Empire Fuel Enhancement System for their 50 trucks.

Empire's Class 8 unit is suitable for engines up to 16L displacement.

Empire is working diligently to provide SIM and Butler with our latest technology and premium service in working towards large purchase orders. These installations are highly visible and will lead to inquiries from other potential users.
