

## Empire Hydrogen Completes Installation on Sprinter Van

**June 25, 2018: Surrey, BC:** Empire Hydrogen has completed installation of a Class 6 Fuel Enhancement System on a 2015 Mercedes Sprinter Van.

The Class 6 model of Empire's Fuel Enhancement System produces up to 1.8 Litres of hydrogen/oxygen accelerant gases per minute, and is the perfect solution for delivery trucks up to 7L in displacement.

2015 Mercedes Sprinter Van

During the manufacturing process, Empire's skilled electronic technicians configure the 12V electrical current input and H<sub>2</sub>,O<sub>2</sub> accelerant gas output to match precisely with the specific requirements of the vehicle and engine, whether that be the small 3L engine of a Sprinter Van up to a massive 300L Caterpillar 3616 generator.

Our customer, Dr. Shete, gets a close-up view of the installation process

In our future plans, Empire hopes to develop fuel enhancement systems for locomotives and ships. CEO Sven Tjelta and Exec. VP Andrew Evans are working diligently to attract new equity investment to the company that will enable us to undertake these new engineering projects. Investors interested in more information and our current activities should contact Sven or Andrew directly at 778-426-0911.
