

Empire Hydrogen Registered with the U.S. EPA

June 23, 2020: Sidney BC: We are very excited to report that after an extensive review, the Empire Hydrogen Fuel Enhancement System is now registered with the U.S. Environmental Protection Agency as a Fuel Additive. Our registration is number:

292520001 H2,O2 Accelerant Gas.

To achieve this registration, we underwent a lengthy process to prove that our system improves emissions as we have long described, but also does not have any harmful environmental side effects.

In particular, we had to provide very significant detail in answer to this question:

Do you have any information developed by or for you concerning the mechanisms of action of this fuel additive, reactions between this fuel additive and gasoline and/or diesel fuel; the identification and measurement of the emission products of this fuel additive when used in gasoline and/or diesel fuel; the effects of this fuel additive on all emissions; the toxicity and any other public health or welfare effects of the emission products of this fuel additive; and/or the effects of the emission on the performance of emission control devices or systems?

The extremely positive results from testing at the BCIT School of Transportation played a vital role in achieving this EPA recognition. We believe that, in combination with our membership in the SmartWay Transport Partnership, the EPA registration will be very highly regarded by any trucking fleet working in the U.S.
