Empire Hydrogen Welcomes Chamber of Commerce

Sidney, BC: Empire Hydrogen Energy Systems welcomed sixty members from the Saanich Peninsula Chamber of Commerce into our factory on January 27. The visiting crowd was divided into four groups to allow for discussions on the innovative aspects and the investment potential of Empire's Fuel Enhancement System.

Our Member of Parliament, Green Party Leader Elizabeth May, joined the Chamber for their tour of local innovative companies and her second visit in recent months to our factory. During the visit, Ms. May spoke up that she has been in discussion with the Federal Minister of Innovation about the benefits of Empire's technology. She also showed her desire to help us contact the Green Party leadership of the City of Oslo, Norway, about their recent decision to ban diesel trucks on high-smog days. Our system offers the perfect solution to this global problem.

Below is an article published in the Peninsula News about this visit.
