

Empire Hydrogen Joins the Federal Government Green Freight Assessment & Implementation Programs

November 5, 2019: Empire Hydrogen is excited to join the Federal Government - Natural Resources Canada **Green Freight Assessment & Implementation Programs**. Under these programs the Government of Canada will rebate up to 50% of the cost of fuel saving equipment, such as the Empire Hydrogen Fuel Enhancement System, with a cap of \$100,000 per fleet.

In these programs, truck fleets undergo an “assessment” (itself 50% paid by the government) to recommend appropriate fuel and GHG saving equipment. Then, the fleet purchases this equipment and receives another 50% rebate from the federal government. This can be combined with other incentives such as the CleanBC Heavy-Duty Vehicle Efficiency Program to pay up to 100% of the cost of equipment.

Empire Hydrogen will be working closely with our Canadian distribution partners to introduce the Green Freight Assessment & Implementation programs to trucking fleets across the country. By cutting the cost of our fuel enhancement system in half, we have reduced the payback period for a typical heavy duty truck to a mere 3 months, making our system even that much more attractive.
